## 1 English

This document describes the changes between various versions of the software for the EIB 741/742. These changes affect the firmware of the EIB 741/742, the driver for Windows and Linux, and the LabView VIs.

EID 744/742 fir	muoro 622294 40 drivor 672044 05	]		
	mware 633281-10, driver 672014-05			
Enhancement	Homing signals and limit signals supported			
Modification	The status of the signal amplitude is displayed correctly for the			
	auxiliary axis when the encoder is connected.			
	Several LabView examples revised			
	Data transfer in Streaming and Soft Realtime mode corrected to avoid			
	loss of data under Linux x64 operating system	<u> </u>		
	EIB7ReadEnDatIncrPos() function optimized			
	With function EIB7ClearEncoderErrors() no EnDat command is sent			
	to EnDat encoders			
	mware 633281-09, driver 672014-04			
Enhancement	Automatic checking of reference marks supported			
	Function EIB7SetRefCheck() added			
	Function EIB7ConfigDataPacket():			
	The configuration data are checked.			
	An empty data packet section leads to an error message.			
Error	Function EIB7EnDat22SetAddInfoCycle():			
correction	Problem: The first FIFO entry is executed only once.			
	Solution: All FIFO entries are executed cyclically. A maximum of 9			
	FIFO entries can be saved.			
	EnDat01:			
	Problem: No position transfer in Soft Real-Time mode in encoders			
	with EnDat 2.1 interface including incremental signals.			
	Solution: The incremental position is transferred in Soft Real-Time			
	mode.			
	Data transfer in Recording mode:			
	Problem: While transferring the recording data, the CPU utilization on			
	the PC can rise to 100 percent if the data are only read slowly from			
	the FIFO.			
	Solution: When the FIFO is full, no data are transferred and			
	processing power is released.			
	Master trigger:			
	Problem: If the axes are controlled from different trigger sources and			
	at the same time axis 1 is not assigned to the master trigger, no data			
	packets are transferred.			
	Solution: The master trigger and the trigger sources can be assigned			
	freely.			
	mware 633281-08, driver 672014-03			
Information	Driver 672014-03 does not support firmware 633281-07. Firmware			
	633281-08 requires the driver 672014-03.			
Enhancement	Function EIB7MasterTriggerSource() added			
	Function EIB7GlobalTriggerEnable() added			
	Function EIB7ConfigPulsCounter() added	]		
	Function EIB7SetIntervalCounterInterpolation() added			
	Function EIB7SetIntervalCounterTrigger() added			
	Function EIB7GetTriggerDelayTicks() added			
	Function EIB7AuxAxisTriggerSource() added			
	Function EIB7AuxGetPosition() added	]		
	EIB741/EIB749 Firmware Change History Description	Release No:	N259	
	The reproduction, distribution and utilization of this document as well as the communication of its contents to others without express authorization is prooffenders will be held liable for the payment of damages. 	HEIDENHAIN D720608 - 01	Revision She	. 4	
	DR. JOHANNES HEIDENHAIN GmbH 83301 Traunreut, Germany  Document No		3/8	

	Function FIDTA: WOotEncoderDate() added
	Function EIB7AuxGetEncoderData() added
	Function EIB7AuxClearCounter() added
	Function EIB7AuxClearSignalErrors() added
	Function EIB7AuxClearTriggerLostError() added
	Function EIB7AuxClearRefStatus() added
	Function EIB7AuxGetRefActive() added
	Function EIB7AuxStartRef() added
	Function EIB7AuxStopRef() added
	Function EIB7AuxSetTimestamp() added
	Function EIB7AxisTriggerSource() added
	Function EIB7SetRITriggerEdge() added
	Function EIB7OutputTriggerSource() added
	Function EIB7SetTriggerInputDelay() added
	Function EIB7AuxSetRITriggerEdge() added
	Function EIB7GetNumOfAxes() added
Modification	Function EIB7SoftwareTrigger(): Expanded for multiple channels
Modification	Function EIB7GetEncoderData(): Triggering changed
	Function EIB7 GetEncoder Data(): Triggering changed  Function EIB7AddDataPacketSection(): Expanded for auxiliary axis
Obsolete	Function EIB7AddDataFacketSection(). Expanded for adxillary axis  Function EIB7EnableTimerTrigger(): Is no longer supported.
Obsolete	
	Replacement:
	To achieve the same configuration as with "EIB7EnableTimerTrigger()", all four axes must first be configured
	with the aid of the function "EIB7AxisTriggerSource()" for the timer
	trigger and then the timer trigger has to be activated through the
	function "EIB7GlobalTriggerEnable()". To deactivate the timer trigger,
	is it enough to use "EIB7GlobalTriggerEnable()" to switch off the
	trigger source. Function EIB7EnableExternalTrigger(): Is no longer supported
	Replacement:
	· ·
	To achieve the same configuration as with
	"EIB7EnableExternalTrigger()", all four axes must first be configured with the gid of the function "EIB7AxisTriggerSource()" for the external

Revision Sheet Version D729698 - 01 - A - 04

Page 5/8

## 2 Deutsch

Dieses Dokument beschreibt Änderungen zwischen verschiedenen Versionen der Software für die EIB 741/742. Diese Änderungen betreffen die Firmware der EIB 741/742, den Treiber für Windows und Linux und die LabView VIs.

	rmware 633281-10, Treiber 672014-05
Erweiterung	Unterstützung für Homing- und Limit-Signale
Modifikation	Bei der Hilfsachse wird der Signalamplitudenstatus bei
	angeschlossenem Messgerät richtig angezeigt.
	Überarbeitung einiger LabView-Beispiele
	Berichtigung der Datenübertragung im Betriebsmodus Streaming und
	Soft Realtime zur Vermeidung von Datenverlust unter dem
	Betriebssystem Linux x64
	Optimierung der Funktion EIB7ReadEnDatIncrPos()
	Die Funktion EIB7ClearEncoderErrors() sendet bei EnDat-Geräten
	kein EnDat-Kommando zum Messgerät
EIB 741/742 Fir	rmware 633281-09, Treiber 672014-04
Erweiterung	Unterstützung einer automatischen Überprüfung der Referenzmarker
	Funktion EIB7SetRefCheck() hinzugefügt
	Funktion EIB7ConfigDataPacket():
	Die Konfigurationsdaten werden geprüft.
	Eine leere Datenpaket-Sektion führt zu einer Fehlermeldung
Fehler-	Funktion EIB7EnDat22SetAddInfoCycle():
korrektur	Problem: Der erste FIFO-Eintrag wird nur einmal ausgeführt
	Lösung: Alle FIFO-Einträge werden zyklisch ausgeführt. Es können
	maximal 9 FIFO-Einträge gespeichert werden.
	EnDat01:
	Problem: Bei Messgeräten mit EnDat 2.1 Schnittstelle inklusive
	Inkrementalsignale wird im Betriebsmodus Soft Realtime keine
	Position übertragen.
	Lösung: Im Soft Realtime Modus wird die Inkrementalposition
	übertragen.
	Datenübertragung im Recording Modus:
	Problem: Bei der Übertragung der Recording-Daten kann die CPU-
	Last am PC auf 100 Prozent ansteigen, wenn die Daten nur langsam
	aus dem FIFO gelesen werden.
	Lösung: Wenn der FIFO voll ist, werden keine Daten übertragen und
	Rechenleistung freigegeben.
	Master-Trigger:
	Problem: Falls die Achsen von verschiedenen Triggerquellen
	angesteuert werden und gleichzeitig die Achse 1 nicht dem Master-
	Trigger zugeordnet ist, werden keine Datenpakete übertragen.
	Lösung: Der Master-Trigger und die Triggerquellen können beliebig
	zugeordnet werden.
EIB 741/742 Fi	rmware 633281-08, Treiber 672014-03
Information	Der Treiber 672014-03 unterstützt die Firmware 633281-07 nicht. Die
	Firmware 633281-08 setzt den Treiber 672014-03 voraus.
Erweiterung	Funktion EIB7MasterTriggerSource() hinzugefügt
	Funktion EIB7GlobalTriggerEnable() hinzugefügt
	<u> </u>
	Funktion EIB7ConfigPulsCounter() hinzugefügt
	Funktion EIB7ConfigPulsCounter() hinzugefügt Funktion EIB7SetIntervalCounterInterpolation() hinzugefügt
	Funktion EIB7ConfigPulsCounter() hinzugefügt

The reproduction, distribution and utilization of this document as well as the communication of its contents to others without express authorization is prohibited Offenders will be held liable for the payment of damages. 6/8

N2591

	Funktion EIB7AuxAxisTriggerSource() hinzugefügt
	Funktion EIB7AuxGetPosition() hinzugefügt
	Funktion EIB7AuxGetEncoderData() hinzugefügt
	Funktion EIB7AuxClearCounter() hinzugefügt
	Funktion EIB7AuxClearSignalErrors() hinzugefügt
	Funktion EIB7AuxClearTriggerLostError() hinzugefügt
	Funktion EIB7AuxClearRefStatus() hinzugefügt
	Funktion EIB7AuxGetRefActive() hinzugefügt
	Funktion EIB7AuxStartRef() hinzugefügt
	Funktion EIB7AuxStopRef() hinzugefügt
	Funktion EIB7AuxSetTimestamp() hinzugefügt
	Funktion EIB7AxisTriggerSource() hinzugefügt
	Funktion EIB7SetRITriggerEdge() hinzugefügt
	Funktion EIB7OutputTriggerSource() hinzugefügt
	Funktion EIB7SetTriggerInputDelay() hinzugefügt
	Funktion EIB7AuxSetRITriggerEdge() hinzugefügt
	Funktion EIB7GetNumOfAxes() hinzugefügt
Modifikation	Funktion EIB7SoftwareTrigger(): Erweitert für mehrere Kanäle
Modifikation	
	Funktion EIB7GetEncoderData(): Triggerung angepasst
	Funktion EIB7AddDataPacketSection(): Erweitert für Hilfsachse
Obsolet	Funktion EIB7EnableTimerTrigger(): Wird nicht weiter unterstützt.
	Ersatz:
	Um die gleiche Konfiguration wie mit "EIB7EnableTimerTrigger()" zu
	erreichen, müssen zuerst alle 4 Achsen mit Hilfe der Funktion
	"EIB7AxisTriggerSource()" für den Timer Trigger konfiguriert und
	anschließend der Timer Trigger über die Funktion
	"EIB7GlobalTriggerEnable()" aktiviert werden. Für die Deaktivierung
	des Timer Triggers reicht es mit "EIB7GlobalTriggerEnable()" die
	Triggerquelle abzuschalten.
	Funktion EIB7EnableExternalTrigger(): Wird nicht weiter unterstützt.
	Ersatz:
	Um die gleiche Konfiguration wie mit "EIB7EnableExternalTrigger()"
	zu erreichen, müssen zuerst alle 4 Achsen mit Hilfe der Funktion
	·
	"EIB7AxisTriggerSource()" für den externen Triggereingang 1
	konfiguriert und anschließend der externe Triggereingang 1 über die
	Funktion "EIB7GlobalTriggerEnable()" aktiviert werden. Für die
	Deaktivierung des externen Triggers reicht es mit
	"EIB7GlobalTriggerEnable()" die Triggerquelle abzuschalten.
Fehler-	Funktion EIB7WriteIO()
korrektur	Problem: Die Funktion akzeptierte auch Handles auf Eingangsports.
	Lösung: Die Funktion akzeptiert nur Handles auf Ausgangsports.
	Funktion EIB7InitAxis()
	Problem: Die Online-Kompensation konnte nicht deaktiviert werden,
	wenn sie einmal aktiviert war.
	Lösung: Die Online-Kompensation kann auch deaktiviert werden.
	Funktion EIB7GetEncoderData()
	Problem: Bei den Referenzpositionen wurden negative Werte
	teilweise nicht richtig im Datenformat ENCODER_POSITION
	dargestellt.
	Lösung: Die Referenzposition wird auch bei negativen Werten korrekt
	·
	ins Datenformat ENCODER_POSITION konvertiert.
	Übertragung der abstandscodierten Referenzmarke
	Problem: Der Wert für abstandscodierte Referenzmarken wurde um
	16 Bit nach rechts geschoben, was einer Division mit 65536
	entspricht.
	Lösung: Der Wert der abstandscodierten Referenzmarke wird nun
	richtig übertragen.

FID 744/740 F	EnDat 2.2 Laufzeitkompensation Problem: Für EnDat 2.2 Messgeräte wurde die Laufzeitkompensation teilweise nicht richtig durchgeführt. Lösung: Für die Laufzeitkompensation bei EnDat 2.2 Messgeräten wird ein Mittelwert aus mehreren Messungen angewendet.	
	rmware 633281-07, Treiber 672014-02	
Erweiterung	Unterstützung der Modi "Recording" und "Streaming"	
	Unterstützung von EnDat Messgeräten in den Modi "Soft Realtime",	
	"Recording" und "Streaming"	
	Funktion EIB7EnDat22SetAddInfo() hinzugefügt	
	Funktion EIB7EnDat22SetAddInfoCycle() hinzugefügt	
	Funktion EIB7ConfigDataPacket()hinzugefügt	
	Funktion EIB7GetRecordingStatus()hinzugefügt	
	Funktion EIB7GetStreamingStatus()hinzugefügt	
	Funktion EIB7TransferRecordingData()hinzugefügt	
	Funktion EIB7GetRecordingMemSize()hinzugefügt	
	Funktion EIB7SelectMode(): Erweiterung für die Modi "Recording"	
	und "Streaming"	
Modifikation	Funktion EIB7InitAxis(): Erweiterung der Funktion um zwei Parameter	
	für "EnDat Recovery Time" und "EnDat Calculation Time"
